

DoMessPro – The new generation of digital pretensioning force indicators

Identify the preload force easily now

Energy efficient

Just press a button and the DoMessPro is immediately ready for use. The device is activated by simply tapping the multifunction button and switches off again automatically when not in use.

Easy & ergonomic use

Thanks to a special design, only a little force is needed at the lever.

Real-time preload indicator

When retensioning the lashing strap, the pretensioning force indicator can remain attached so that the pretensioning force applied can be observed live.

Rechargeable battery

Thanks to the integrated rechargeable battery, the DoMessPro can be easily recharged with a USB cable and is therefore always ready for use.

Quick adjustment at the push of a button

Easily switch between LC 2.000 daN and LC 2.500 daN.

Highest pretensioning forces simply displayed

In contrast to standard „measuring devices“, the DoMessPro offers a uniquely large measuring range of up to 1.250 daN, so that even higher pretensioning forces can be detected.

Features of the DoMessPro

- For 50 mm lashing straps
- For LC 2.000 daN and 2.500 daN
- Pretensioning force display up to 1.250 daN
- 7 segment digital display for reading the pretensioning force
- Rechargeable battery with USB-C socket
- Indirect measurement by force transmission through belt deflection
- Multifunction button for setting the LC of the existing lashing strap and for switching on the device
- Supplied in a case with foam insert
- Weight (without case) = 2,0 kg
- CE-marking

Simple safe application

- 1 Use the toggle button to select the necessary lashing capacity.
- 2 Guide the DoMessPro sideways over the lashing strap.
- 3 Move the lever to the measuring position so that the belt deflects. The DoMessPro is then aligned in the measuring position and does not slip down the strap.
- 4 Read off the pretensioning force on the display.
→ Retensioning is possible without any problems while the DoMessPro remains on the strap. The display shows the new pretensioning force value after a few seconds.
